## Senior Full-Stack Engineer

+92 326 4049161 · abdurehman917@gmail.com · @AbdulRehman3737 (github.com/AbdulRehman3737) · linkedin.com/in/abdul-rehman-10876521b · Lahore, Pakistan (Remote-open)

---

Senior Full-Stack Engineer, 5+ years deep in React and NestJS. I take a feature from API and data model through the UI and into CI/CD myself, rather than handing pieces off between specialists. Currently building platform tooling at Jeeny, an international ride-hailing platform operating primarily in Saudi Arabia and Jordan.

## EXPERIENCE

---

### Senior Software Engineer · Jeeny

Apr 2023 — Present

International ride-hailing platform (Android & iOS), primarily Saudi Arabia & Jordan · grew from 362 to 700+ employees during my tenure

- Sole architect of Cockpit, Jeeny's internal configuration platform, working directly with the CTO and the requirements engineering team. Still in active development after 3+ years, with new modules added regularly.
- Built the shared component library the rest of the product now runs on. New UI features that used to take days ship in hours.
- Introduced CI/CD and automated testing to a codebase that had neither. Production incidents dropped noticeably afterward.
- Mentored 4 mid-level engineers over 5 months — all four are now senior and running independently on the driver, passenger, and ride squads.

### Software Engineer · Devsinc

Apr 2022 — Apr 2023

Software consultancy

- Onboarded into a large, mature codebase and was shipping production-ready features by the first sprint.
- Refactored legacy modules into clean, modular components. Bug reports in those areas fell off noticeably afterward.

### Intern Software Engineer · Tkxel

Jan 2021 — Mar 2022

Software consultancy

- Sole frontend engineer on a client project, turning Figma designs into responsive, accessible UI.
- Built the Axios-based API integration patterns other engineers on the team reused for later projects.

## PROJECTS

---

### Cockpit (internal, Jeeny)

NestJS, React, MongoDB, Axios, ACL / RBAC

Jeeny's internal configuration platform. Replaces manual database commands and Slack permission chains with a proper UI and access-control layer.

Impact: Config changes: hours-to-days → minutes, for ~100-150 users across 3 offices

### BioGenome

Next.js, TypeScript, Tailwind CSS, Biopython

A bioinformatics analytics platform for DNA/RNA/protein sequence analysis and restriction-enzyme mapping, built as a fast, serverless Next.js app.

### AspireFoundation

Next.js, React, TypeScript, Tailwind CSS

A donor-facing marketing site for a non-profit running orphan care, medical aid, food distribution, and emergency relief programs — home, about, programs, contact and donate.

## SKILLS

---

**Frontend:** React, Redux Toolkit, Material UI, Tailwind CSS, Framer Motion, SWR, Bootstrap, SCSS

**Backend:** NestJS, Node.js, MongoDB, Mongoose, REST API design

**Tooling:** CI/CD pipelines, Automated testing, Git, Cursor, Cline

## EDUCATION

---

### B.S. Software Engineering

2017 — 2021

University of Management and Technology, Lahore

AI Nano Degree, University of Management and Technology — Apr 2026 – present
