Senior Full-Stack Engineer with 5+ years building and shipping React + NestJS applications. Owns features end-to-end — from API design and MongoDB schema through to polished frontend and CI/CD. Currently building platform tooling at Jeeny, an international ride-hailing platform operating primarily in Saudi Arabia and Jordan.

EXPERIENCE

Senior Software Engineer · Jeeny

Apr 2023 — Present

International ride-hailing platform (Android & iOS), primarily Saudi Arabia & Jordan · grew from 362 to 700+ employees during my tenure

- Sole architect of Cockpit, Jeeny's internal configuration platform — partnered directly with the CTO and requirements engineering team; in continuous development for 3+ years and still growing with new modules.
- Built a shared component library adopted across the product; new UI features went from days to hours.
- Set up CI/CD and automated testing where none existed; production incidents dropped noticeably.
- Mentored 4 mid-level engineers over 5 months into senior roles; all now work independently across the driver, passenger, and ride squads.

Software Engineer · Devsinc

Apr 2022 — Apr 2023

Software consultancy

- Onboarded into a large, mature codebase and shipped production-ready features from the first sprint.
- Refactored legacy modules into clean, modular components — bug reports in those areas fell off meaningfully.

Intern Software Engineer · Tkxel

Jan 2021 — Mar 2022

Software consultancy

- Sole frontend engineer on a client project — converted Figma designs into responsive, accessible UI.
- Built Axios-based API integrations with error-handling patterns the team reused on later projects.

PROJECTS

Cockpit (internal, Jeeny)

NestJS, React, MongoDB, Axios, ACL / RBAC

Jeeny's internal configuration platform — replaces manual database commands and Slack permission chains with a proper UI and access-control layer.

Impact: Config changes: hours-to-days → minutes, for ~100-150 users across 3 offices

BioGenome

Next.js, TypeScript, Tailwind CSS, Biopython

A bioinformatics analytics platform for DNA/RNA/protein sequence analysis and restriction-enzyme mapping, built as a fast, serverless Next.js app.

AspireFoundation

Next.js, React, TypeScript, Tailwind CSS

A donor-facing marketing site for a non-profit running orphan care, medical aid, food distribution, and emergency relief programs — home, about, programs, contact and donate.

SKILLS

Frontend: React, Redux Toolkit, Material UI, Tailwind CSS, Framer Motion, SWR, Bootstrap, SCSS

Backend: NestJS, Node.js, MongoDB, Mongoose, REST API design

Tooling: CI/CD pipelines, Automated testing, Git, Cursor, Cline

EDUCATION

B.S. Software Engineering

2017 — 2021

University of Management and Technology, Lahore

AI Nano Degree, University of Management and Technology — Apr 2026 – present
